**DETAILED ACTION**

***Election/Restrictions***

1. A telephone call was made to David Carlson on February 7, 2005 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-9, drawn to an integrated circuit with a first and second inductances, classified in class 455, subclass 292.
- II. Claims 10-14, drawn to a method for receiving modulated first and second modulated signals and demodulating the first and second signals, classified in class 455, subclass 205.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In this case, the integrated circuit with first and second inductances of Group I could be used, for example, in a downconverter. In the instant case, invention II has separate utility such as a high-speed modem. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
